Art Unit: 2613

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. The drawings were received on 8/23/04. These drawings are acceptable.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 27-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 5. Claim 27 recites the limitation "the compressed domain" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

Art Unit: 2613

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claims 14-16, 18-25, and 27-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chida (5,675,393) in view of Chang et al (5,408,274).

Chida, in Figures 4, 10, 13, and 15, discloses substantially the same computer program and method of, in a compressed domain, as specified in claims 14-16, 18-25, and 27-29 of the present invention, forming a composed video image (e.g. frame) having a first format comprising a number of different original video images (e.g. GOB) having a second format, when the original images are coded by a coding method using an algorithm forming a video stream comprising a number of group of blocks GOB having a flexible structure, comprising the steps of composing the original video images having a second format into one image having the first format, and inserting a segment header FH at the intersection between a first row of original images in the composed image and a second row of original images in the composed image (Fig. 13).

With respect to claims 15, 16, 18-25, and 27-29, Chida also discloses performing a stepwise change of quantizer value GQUANT at the cross-section between adjacent original images in the composed image; introducing a new segment header FH at the beginning of every line of the image; and when flexible type segments are available,

Art Unit: 2613

characterized in that segments corresponding to rows in the sub images are used (Fig. 4).

Although Chida discloses the common motion compensation process in the image coding unit 10, it is noted Chida differs from the present invention in that it fails to particularly disclose any motion vector manipulations as specified in claims 14-16, 18-25, and 27-29. Chang et al however, in Figure 7, teaches the concept of such well known motion compensation encoding technique wherein motion vector differences are recalculated (i.e. 53 during the prediction loop) within the MPEG standard.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made, having the references of Chida and Chang et al before him/her, to exploit other equivalent transmission standards, as taught by Chang et al, in the coding unit of Chida in order to conform with various regulations to achieve a more versatile image composition.

Response to Arguments

9. Applicant's arguments with respect to claims 14-16, 18-25, and 27-29 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2613

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Y. Lee whose telephone number is (703) 308-7584.

The examiner can normally be reached on (703) 308-7584.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Kelley can be reached on (703) 305-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
